

**Pretest Counseling Session #1
(Mother-To-Child Transmission [MTCT])
Counselor**

Counselor

During this pretest session, your patient is undecided about whether to be tested for HIV. Evaluate her medical chart, assess associated risk, and proceed with the session.

Patient

Kim, a 24-year-old female, is here for pretest counseling. Her husband is an active-duty soldier who has been deployed many times. She is unsure if she should be tested.

**Clinical
Information**

S: No complaints. Here for counseling to decide on testing.
